CHARACTERISTICS OF FAUX WOOD BLINDS

Faux wood blinds are an excellent and economical alternative to wood blinds for many applications and offer a long lasting performance. A durable engineered polymer material is used for all colors with the exception of the darker colors in Premium Grain II. These Premium Grain darker colors; Early American, Colonial Maple, and Special Walnut are made of acrylic styrene acrylonitrile (ASA).

Faux wood blinds are not intended for installation near heat sources such as radiators, heat registers, and space heaters which can potentially compromise the integrity of the faux wood material. Airflow through the blind is also very important. Keeping slats closed for long periods of time and/ or using additional window treatments in front of or behind blinds can significantly increase the temperature the blinds are exposed to. These high temperatures (above 140°F / 60°C) may cause the slats to warp or twist.

NOTE: This limited warranty extends only to BDD direct fabricator/retailer customer and not to the consumer purchases of the product. In no event shall BDD be liable or responsible for INCIDENTAL OR CONSEQUENTIAL DAMAGES or for any other direct or indirect damage, loss, cost, expense or fee.
